RE: Price Quote for DLS analysis of one sample

Dynamic light scattering analysis

setup fee (applies to each group of measurements)	\$100 cost
per sample (per measurement for multiple time points or temperatures)	\$325

This per sample cost includes a graph with the size distribution, a peak table (including the polydispersity index for each peak), and a full report with our interpretation of the data.

Thus to measure a single sample (without a buffer control) the total cost is \$425.

This quote is valid for 6 months. Our payment terms are net 30 days.

A handwritten signature in black ink that reads 'John Philo'.
